

ZAIN BUTT

Full Stack Web Developer

React.js • Node.js • Python • Django • FastAPI

ABOUT ME

Passionate **Full Stack Web Developer** with over a year of hands-on professional experience at **360 Business Consultant**, combined with an active freelance career delivering production-grade web applications for international clients across ride-hailing, real estate, e-commerce, and AI-integrated domains.

Specialized in building end-to-end solutions from concept to deployment — combining **React.js** for elegant, responsive frontends with the power of **Node.js** and **Python** (Django, Flask, FastAPI) on the backend. Also experienced with **RAG (Retrieval-Augmented Generation)** technology for building AI-powered, context-aware applications. Successfully delivered a complete Uber-style ride-hailing platform for a Dubai-based transport company, a full-stack real estate website for a UK-based client, a weather forecasting application, and multiple e-commerce systems.

Comfortable working across the entire stack — from designing scalable database schemas and RESTful APIs, to deploying production applications with Docker, Nginx, and PM2. Looking to bring my problem-solving mindset, self-driven work ethic, and proven client-delivery track record to a full-time role where I can build products that create real business impact.

CORE STRENGTHS

- | | |
|------------------------------|----------------------------|
| ✓ End-to-End Web Development | ✓ RESTful API Architecture |
| ✓ Ride-Sharing Platforms | ✓ E-Commerce Solutions |
| ✓ AI/ML API Integration | ✓ Database Design |
| ✓ Production Deployment | ✓ Client Communication |

LANGUAGES

- | | |
|---------|--------------|
| English | Professional |
| Urdu | Native |

TOP SKILLS

- | | |
|-----------------------|------------|
| React.js | Expert |
| Node.js | Expert |
| Python (Django/Flask) | Advanced |
| FastAPI | Advanced |
| MongoDB / PostgreSQL | Advanced |
| Docker / Nginx / PM2 | Proficient |

PROFESSIONAL EXPERIENCE

Full Stack Web Developer

360 Business Consultant

1 Year

- ▶ Developed and maintained **full-stack web applications** using React.js on the frontend and Node.js/Python on the backend, supporting internal business tools and client-facing platforms.
- ▶ Built and integrated **RESTful APIs** connected to relational databases (MySQL/PostgreSQL), streamlining data flow across business operations.
- ▶ Collaborated closely with cross-functional teams — including business consultants and operations staff — to translate business requirements into functional, scalable web solutions.
- ▶ Contributed to **UI/UX improvements** and performance optimization of existing systems, improving load times and overall user experience.
- ▶ Gained strong foundational experience in professional software development workflows, code reviews, and working within a structured team environment.

Freelance Full Stack Web Developer

Self-Employed | International Clients

2024 - 2025

- ▶ Designed, developed, and deployed a **full-featured Uber-style ride-hailing web platform** for a Dubai-based private taxi company, implementing real-time ride booking, driver-passenger matching, dynamic fare calculation, trip history tracking, and interactive map integration.
- ▶ Built multiple **end-to-end e-commerce web applications** featuring product catalogs with search & filters, secure checkout flows, payment gateway integration, order management systems, and comprehensive admin dashboards using the MERN stack.
- ▶ Delivered **AI-integrated web solutions** for international clients by consuming and orchestrating third-party ML/AI APIs within full-stack applications, enabling intelligent features such as automated content generation, smart search, and workflow automation.
- ▶ Architected and deployed scalable **RESTful APIs** using Node.js and Python frameworks (Django, Flask, FastAPI). Production deployments powered by **Docker** containers, **Nginx** reverse proxy, and **PM2** process manager for reliability and uptime.
- ▶ Designed and optimized **relational and NoSQL database schemas** across MySQL, PostgreSQL, and MongoDB — ensuring performance, data integrity, and scalability under real-world traffic loads.
- ▶ Implemented **authentication and authorization** systems using JWT, role-based access control, and secure session management across multiple client projects.
- ▶ Collaborated directly with **global clients across time zones** — gathering requirements, delivering iterative demos, integrating client feedback, and shipping production releases on tight timelines with clean, documented code.
- ▶ Established a strong reputation for **reliability, code quality, and post-deployment support**, resulting in repeat business and long-term client relationships.

FEATURED PROJECTS

► Ride-Hailing Platform (Uber-Style)

Client: Dubai-based Private Taxi Company (UAE) | Role: Full Stack Developer

A production-grade ride-hailing web platform enabling seamless passenger-driver interactions, mirroring core Uber functionality tailored for the UAE market. Delivered as a complete solution from database design to deployment.

Key Features: Real-time ride booking & matching, GPS-based driver location tracking, dynamic fare calculation, complete trip history, driver ratings & reviews, admin dashboard for fleet management, secure user authentication.

Tech Stack: React.js • Node.js • MongoDB • REST APIs • Map Integration

► Real Estate Listings Website

Client: United Kingdom (UK) | Role: Full Stack Developer

A complete full-stack real estate platform enabling users to browse, search, and filter property listings, with a dedicated admin panel for agents to manage listings and inquiries. Built end-to-end for a UK-based client to establish their property business online.

Key Features: Property listings with image galleries, advanced search & filters (location, price, type), inquiry/contact forms, agent admin dashboard, responsive design for mobile property browsing.

Tech Stack: React.js • Node.js • MongoDB/MySQL • REST APIs

► Weather Forecast Application

Personal / Client Project | Role: Full Stack Developer

A responsive weather forecasting web app that lets users search any city and view real-time conditions along with a multi-day forecast, built with a Django backend and a React frontend.

Key Features: Real-time weather data by city/location search, multi-day forecast view, historical weather data storage in PostgreSQL, clean and responsive UI.

Tech Stack: React.js • Django • PostgreSQL • Weather API

FEATURED PROJECTS (CONTINUED)

► Full-Stack E-Commerce Platform

Multiple Client Deliveries | Role: Full Stack Developer

Complete e-commerce solutions with modern user experience, secure transactions, and full admin control. Built for scalability and easy customization based on client business needs.

Key Features: Product catalog with search/filters, shopping cart, secure checkout with payment gateway integration, order tracking, user account management, wishlist, and full-featured admin dashboard for inventory and order management.

Tech Stack: React.js • Node.js • MongoDB / MySQL • JWT Auth • Payment APIs

► AI-Integrated Web Applications

International Clients | Role: Full Stack Developer

Custom web platforms integrating AI/ML capabilities, including **RAG (Retrieval-Augmented Generation)** pipelines, to automate workflows, enhance user experience, and deliver intelligent features. Focused on seamless integration of third-party AI APIs with custom business logic.

Key Features: AI-powered content generation, RAG-based knowledge retrieval and Q&A, intelligent data processing, automated workflow triggers, smart search and recommendations, custom API orchestration layer.

Tech Stack: React.js • Python (FastAPI / Flask) • RAG • AI/ML APIs • REST APIs

► Additional Freelance Deliveries

Successfully delivered multiple additional full-stack web projects for a diverse international client base, including business websites, custom web tools, admin panels, and API integrations. Full project portfolio and live demos available on GitHub.

Portfolio: [Add GitHub / Portfolio URL for detailed project links]

KEY ACHIEVEMENTS

Delivered a full Uber-style platform for a Dubai client

Built a full-stack real estate site for a UK client

Integrated AI/ML APIs into web platforms

Served international clients across time zones

Full ownership: design → develop → deploy

Built long-term client relationships via repeat work

EDUCATION

In Progress

Bachelor of Science in Computer Science (BSCS)

[University / UOP] (Freeze due to some issue)

Completed 4 semesters; currently on academic pause while pursuing full-time freelance development work and real-world project experience.

CERTIFICATIONS & LEARNING

- ★ [Add certification 1 — e.g., Meta Front-End Developer]
- ★ [Add certification 2 — e.g., freeCodeCamp Full Stack]
- ★ [Add online courses — Udemy, Coursera, etc.]
- ★ Self-taught full-stack development through consistent hands-on project work
- ★ Continuous learning through client projects across multiple tech stacks

WHY HIRE ME

Proven client-delivery track record

Focus on clean, maintainable code

End-to-end ownership (dev → deploy)

Fast learner, self-driven work ethic

Experience with international clients

Strong communication & documentation
